

Replicant GEN 1 — Free and Open

For makers, tinkerers, researchers, and students

Who this is for

You want to build, learn, research, or teach with the Replicant GEN 1 platform. You are not running a commercial manufacturing business with it.

What you can do

- **Build** one for yourself, or for your class, lab, or club.
- **Fork** the design. Change anything you like.
- **Share** your changes publicly.
- **Sell** small numbers at cost or for fundraising, as long as you follow the licence.

What it costs

Zero dollars. The design files are free under CERN-OHL-W-2.0.

Example: Print a frame, solder the flight controller, fly it in your backyard. No invoice, no account, no reporting.

What you promise (four things)

- **Publish** your changes. If you modify the design and share the hardware with others, you share the design files too.
- **Credit** Yirra Systems and the Replicant GEN 1 project.
- **Don't imply** Yirra endorses you or your fork.
- **Don't attack** other users with patents. If you sue someone over this design, your own licence ends.

What happens if you mess up

The licence ends automatically. You lose the right to build or share the design until you fix it. We don't send lawyers. You just lose the licence.

Where to get it

Download the design files at yirrasystems.com/download. No login, no form, no fee.
